Gentle and predictable cervical ripening in labour preinduction

- significant increase of cervical ripening and Bishop score enabling labour induction\(^1,2\)
- minimal risk of uterine hyperstimulation and impact on the fetal heart rate\(^2,3\)
- no pharmacological side effects
- very high patients acceptability
- accentuates the physiological processes of labour

DILAPAN-S\(^{®}\) is an osmotic cervical dilator made of a patented AQUACRYL hydrogel. It is a rigid hygroscopic gel rod that increases its volume by absorbing fluids and gradually dilates the cervix. 4–6 hours after application the following dilation is reached — from 3 up to 8,3–10 mm or from 4 to 10–12,5 mm, respectively. Indications for use: cervical ripening prior to the induction of labour. Cervical dilation prior to the instrumental procedures in the uterine cavity, such as pregnancy termination.
